

FCAT

Drain Moisture, Not Expensive Compressed Air

FCAT – Description:

The IndoAnushka make Float type Compressed Air Trap is designed as a complete solution for draining of Moisture from Compressed Air Receiver. The FCAT is a complete system in itself where the water is allowed to drain and the air is prevented from going out along with the water.

Whenever air is trapped inside the float trap, the same is sent back into the system through the balancing line mechanism of air disposal bulb and thus maintains the system in equilibrium with the air receiver.

Size	½" FLANGED END
MOC	CI BODY AND SS INTERNAL, M.S. PIPING, FLANGES, BULB.
Max. All. Pr.	20 KG/CM2
Max. All. Temp	180 °C

This is one time installation system which does not contain any instrumentation and hence has minimal maintenance challenges after it is installed. This strainer used in this system is with online cleaning facility hence no shutdown is needed to clean the strainer.
